

Hello Hiring manager at Ottobock,

I am writing to express my interest in the Data Engineer position at Friendsurance. With over nine years of experience as a Senior Information Architect, I specialize in building high-performance Azure-based data foundations that turn complex ERP and operational data into strategic assets.

My technical profile directly addresses your core requirements:

Azure & Databricks Expertise: I have architected and owned end-to-end strategies for high-performance Azure Databricks platforms, utilizing PySpark and Spark/Python for scalable ETL/ELT pipelines.

API Ingestion & Connectivity: I have deep experience connecting internal and external sources, including developing Python-based OAuth API connectors and automated ingestion for unstructured community data.

Modern Engineering Standards: I am a Certified Power BI Data Analyst Associate with extensive experience in SQL, dbt (Jinja), Git, and CI/CD workflows to ensure high-availability "Gold" layer data.

Holding a BA in Computer Science & Economics and an MBA, I bridge the gap between technical implementation and business value. Based in Berlin, I am a native English speaker with business-fluent German (B2).

It would be a pleasure to hear and learn about the role.

Regards,
Ran Oren
